DETAILED ACTION

Drawings

1. The drawings are objected to because items 331, 333, and 334 are not shown in any of the figures. The specification mention the electromagnetic wave proof in figure 3 but it is not shown in fig. 3.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1 and 26 “could be” is vague.

In claims 1-9, 15-17 what would the sensor’s conductive material “put” through the control panel.

Perhaps, in claim 1, “said” should be inserted before “metal or magnetic material”.

In claim 10, “said detected result” and “said micro-process” lacks antecedent basis.

Claim 12 appears to recite the same recitation in claim 10 “said micro-processor detecting any metal...prompting said warning device to warn users”.

In claim 15 “said control panel receiving signals from said sensor puts through said control panel’s electronic circuit injects,” is vague.

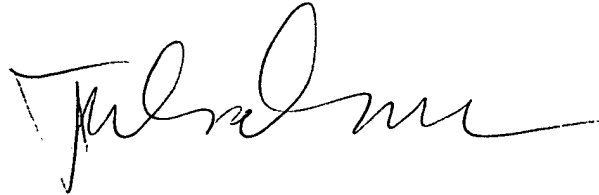

In claim 18, it is not clear how can the detector detects through the electromagnetic wave-proof as it is used for isolating the sensor’s detection.
